

Good assets. Put to **work**.

Securities lending, native on the XRP Ledger.

Tokenised securities give holders ownership.

Patapim gives them a way to lend those securities, for a fee.

Track 2 / Closed-ended vault

Loaded / XLS-65 + XLS-66

A market with an agent on the hook.

01 / SUPPLY

Eligible holders

Deposit securities.
Receive vault shares.

02 / POOL

Fixed-term vault

Native XRPL objects.
A defined lending window.

03 / DEMAND

Borrowers

Borrow securities.
Repay principal and interest.

The lending agent posts first-loss capital in the same security.

Eligibility the ledger actually enforces.

One eligible deposit.

One refused deposit.

Credentials and a Permissioned Domain control access to the lender pool.

Open live vault

Eligible holder / VaultDeposit

tesSUCCESS

Non-member / VaultDeposit

tecNO_AUTH

The calendar is a protocol rule.

01 / SUBSCRIPTION

Deposit

LoanSet refused:

tecT00_SOON

02 / INVESTMENT

Lend

VaultDeposit refused:

tecEXPIRED

03 / REDEMPTION

Withdraw

LoanSet refused:

tecEXPIRED

Watch the phase and refusal list change on a fresh ledger read.

Two signatures. One loan.

Lending agent

Borrower

=

LoanSet

THE ASSET

MPT security

Delivered to the borrower.

THE CAPITAL

First-loss cover

Agent-funded, in securities.

THE COLLATERAL

XRP Escrow

Managed bilaterally.

The borrower defaults.

The agent pays.

2,000,000

Securities absorbed by agent cover.

Cover falls from 2,500,000 to 500,000.

Vault assets after default: 5,000,000.

Net share price = (AssetsTotal - LossUnrealized) /
OutstandingAmount

STATE	NET SHARE PRICE
Loan drawn	1.00
Impaired	0.60
Default settled	1.00

What building it made visible.

- | | | |
|----|--|--|
| 01 | The mandated beta cannot co-sign. | Backport the counterparty hash prefix fix. |
| 02 | No SDK release covers both halves. | Ship V1.1 types and correct signing together. |
| 03 | Same lending amendments.
Different network rules. | Publish effective protocol versions per network. |

A fixed end date needs a way to recall.

A closed-ended vault protects the calendar.
An unpaid loan can still leave it illiquid at redemption.

PROPOSED / NOT IMPLEMENTED

tfLoanCall

Let the agent call a loan before term, against the borrower's grace period.

A working trade. A useful contribution.

Loan and LoanBroker IDs should be
searchable.

Our Explorer pull request routes these identifiers to their vault using
the existing ledger-entry lookup.
